It’s poor education that drives inequality in South Africa

Credit: Tony Stone, ChatGPT, Dept. Basic Education

Pre-1994 Bantu education

South Africa's Bantu Education system (introduced by the Bantu Education Act of 1953) was a cornerstone of apartheid designed to limit Black educational potential, restrict career opportunities to manual labour, and maintain white supremacy. The syllabus was stripped of academic rigor and focused heavily on practical skills and menial labour, ensuring Black South Africans were trained primarily for subservient roles in the economy. The policy mandated teaching in students' native tongues well into their schooling, limiting fluency in English and Afrikaans and effectively isolating Black learners from higher education and the broader economy.

Black education was funded almost exclusively by taxes collected from Black communities. In the 1970s, per-capita government spending on white students was over ten times higher than for Black students. Schools suffered from severe shortages of basic infrastructure, with many lacking running water, electricity, or proper plumbing.

Pupil-to-teacher ratios in Black schools soared between 40:1 and 60:1, leading to severe overcrowding.
Underqualified Staff: State control led to a drastic shortage of competent educators. By the early 1960s, only 10% of Black teachers held a matriculation (final high school year) certificate.

The government enforced the segregation of universities, establishing separate, under-resourced "tribal colleges" for Black students under the Extension of University Education Act. This severely restricted access to professional and academic careers.

However, the University of Fort Hare was established on February 8, 1916. It was originally founded under the name "South African Native College" on the site of a former British military stronghold in Alice, Eastern Cape. It was the first institution in Southern Africa instituted for the higher education of Black students. Fort Hare is widely celebrated as an intellectual hub of the anti-apartheid movement, with alumni including Nelson Mandela, Oliver Tambo, Desmond Tutu, and Robert Sobukwe. The college was affiliated with Rhodes University in 1951 and officially renamed the University College of Fort Hare before becoming the University of Fort Hare.

Post 1994 Education

Post-1994 education reform in South Africa focused on dismantling the fragmented, racially segregated apartheid system and establishing a unified, equitable, and democratic educational framework. Key milestones include the integration of departments, the introduction of outcomes-based education, and the ongoing implementation of the Curriculum and Assessment Policy Statement (CAPS).

The transformation of the South African education system since 1994 has been a phased journey aimed at overcoming decades of inequality. The fragmented, racially-based 19 departments were integrated into one national and nine provincial departments, ensuring a unified approach to funding and policy implementation. Historically disadvantaged schools saw heavy infrastructure investment, with thousands of new and replacement schools built and equitable funding models established to reallocate resources to historically underfunded areas.

Introduced, Outcomes-Based Education (OBE) to break away from the rote memorization of the apartheid era. It aimed to encourage critical thinking, but faced heavy criticism due to implementation challenges and lack of teacher preparation. To address the shortcomings of OBE, the state rolled out the Curriculum and Assessment Policy Statement (CAPS) in 2012, which provided structured, clear guidelines for teachers and standardized evaluation methods.

The government merged multiple historically separated and often under-resourced universities and technikons to form comprehensive universities and Universities of Technology, intended to pool resources and level the playing field. Policies have been continually adapted to improve access, including the rollout of funding mechanisms like the National Student Financial Aid Scheme (NSFAS) to support students from impoverished backgrounds.

The implementation of Education White Paper 6 paved the way for the inclusion of vulnerable learners and those with special needs into mainstream public schools, aiming to reduce barriers to learning. Early Childhood Development (ECD): Progress has been heavily focused on standardizing Grade R (reception year) before Grade 1, and expanding foundational learning to set better baselines for children.

But, with all this reform, is there a deeper problem

If so, where’s the real problem

Despite vast improvements in enrolment rates and access, the system continues to grapple with challenges regarding the overall quality of educational outcomes, and lingering inequalities across different provinces.

South Africa faces deep, systemic challenges regarding the quality and capacity of educators in township schools. The legacy of apartheid and subsequent resource constraints have created a crisis that severely impacts learning outcomes, particularly in reading and mathematics.

The crisis in township schools is tied to several distinct factors:

Large-scale standardized assessments (like SACMEQ and TIMSS) have repeatedly shown that a concerning percentage of South African teachers lack the baseline subject knowledge required for the grades they teach. In math and foundational reading, many educators struggle to teach higher-order concepts because they themselves were products of a historically compromised education system.

Teachers often struggle to blend pedagogical strategy with subject matter. Furthermore, many township schools are forced to teach students in their mother tongue in lower grades, but must transition to English in higher grades—a shift that many educators are not adequately trained to manage.

Township schools frequently suffer from poor school management, lack of accountability, and union-related disruptions that take educators out of the classroom. Furthermore, teachers often have to navigate overcrowded classrooms and a severe lack of teaching materials.

Many township educators operate in high-stress, under-resourced, and occasionally unsafe environments. This can lead to teacher burnout, low morale, and absenteeism, which severely hinders the quality of instruction. While there are many highly dedicated teachers and principals who consistently achieve good results despite the odds, the systemic shortcomings remain a massive hurdle for the Department of Basic Education. The government continues to implement programs to improve the quality of instruction, but the structural backlog remains.

Even matriculants from weak schools struggle to access universities or accredited training because of low marks or financial barriers. University dropout rates remain high (~55% overall; even higher for first-generation students). As a result, the pipeline from school to tertiary to skilled employment disproportionately benefits the upper-middle class. Question us, whose fault is that? Certainly not the upper-middle class.

Table 1: How it sustains inequality

Education Factor	Effect on Inequality	Illustration
Unequal funding & infrastructure	Unequal learning environments	Rural school with 50 learners/class vs suburban school with 20
Teacher quality gaps	Lower performance in poor areas	Experienced teachers avoid rural posts
Weak early literacy/numeracy	Early disadvantage compounds	81% can't read by Grade 4
Low tertiary access	Limits upward mobility	Only ~20% of youth enter university
Skills mismatch	Traps youth in unemployment	Youth unemployment ≈ 45–50%
Private/public divide	Concentrates opportunity	20% of schools feed 80% of universities

In short:

South Africa's education system reproduces rather than reduces inequality. Quality of schooling, not just years of schooling, determines life chances — and that quality is still distributed along racial and income lines. Below is a short "Education Inequality Dashboard" showing provincial learning outcomes, funding gaps, and unemployment by education level.

Table 2: Shows where the education gap is widest, by province and outcome *(See colour coding below)*

Province	Grade 12 Pass Rate (2024)	% Learners Below Reading Standard (Grade 4)	Avg Learner Teacher Ratio	% Schools Without Basic Infrastructure	Youth (15–24) Unemployment Rate	Inequality Indicator (Gini/Qualitative)
Gauteng	85%	60%	31:1	12%	46%	High but improving — urban resource advantage
Western Cape	82%	55%	29:1	10%	43%	Moderate inequality — strong education base
KwaZulu-Natal	78%	70%	35:1	24%	51%	Persistent rural–urban divide

Province	Grade 12 Pass Rate (2024)	% Learners Below Reading Standard (Grade 4)	Avg Learner Teacher Ratio	% Schools Without Basic Infrastructure	Youth (15–24) Unemployment Rate	Inequality Indicator (Gini/Qualitative)
Eastern Cape	77%	78%	37:1	33%	55%	High inequality — rural poverty entrenched
Free State	86%	68%	34:1	20%	48%	Strong matric but weak foundational literacy
Limpopo	72%	80%	38:1	35%	57%	Very high inequality — poor schools widespread
Mpumalanga	78%	75%	36:1	30%	53%	Infrastructure deficits limit progress
North West	79%	74%	35:1	26%	52%	Uneven teacher quality
Northern Cape	76%	72%	33:1	22%	49%	Sparse schools, high transport costs

National Averages (2024–2025)

- **Grade 12 pass rate:** ≈ 80%
- **Reading for meaning (Grade 4):** ≈ 19% proficiency (i.e. 81% below standard)
- **Youth unemployment:** ≈ 49%
- **Gini coefficient:** ≈ 0.63 (among highest globally)

	Relatively equitable provinces (Gauteng, Western Cape)
	In between Green and Red but still inadequate
	High inequality & poor foundational learning (Limpopo, Eastern Cape, KZN)

South Africa's objectives must be to close South Africa's opportunity gap by improving education quality, skills alignment, and equal access, thereby reducing structural inequality and unemployment. This will need the following key challenges to be overcome:

1. **Unequal foundation** – Early-grade literacy/numeracy crisis (8 in 10 learners behind by Grade 4).
2. **Resource disparities** – Rural/township schools lack qualified teachers, libraries, and digital tools.
3. **Inefficient funding & accountability** – Weak governance, corruption, and teacher absenteeism.
4. **Transition failure** – Only ~60% of learners reach matric, and few access quality tertiary or vocational training.
5. **Skills mismatch** – Economy demands STEM and technical skills; schools produce low-skill graduates.

Table 3: Strategic Policy Levers needing implementation and close management

Policy Lever	Action Step	Expected Impact
Early Literacy/Numeracy Drive	Expand mother-tongue instruction, reading coaches, and Grade R–3 support	Close foundational gaps by age 10
Teacher Quality & Incentives	Better pay for rural posts, continuous development, performance-linked bonuses	Reduce teacher absenteeism and turnover
Infrastructure & Digital Access	Provide internet & solar-powered labs to all quintile 1–3 schools by 2030	Reduce rural learning isolation
TVET & Skills Revamp	Align curricula with local industry demand, expand apprenticeships	Increase youth employability
Public–Private Partnerships	Use business mentorship and funding to upgrade poor schools	Leverage private sector capacity
Accountability & Governance	Strengthen school management, audit budgets, empower school governing bodies	Improve efficiency, reduce leakage

Measurable Targets (by 2030)

- Reading-for-meaning proficiency: up to 60% (from 19%)

- Matric completion: up to 80% (from 60%)
- Youth unemployment: down to 30%
- Digital access: 100% of public schools online

Summary Insight

South Africa doesn't just have an *education gap* — it has an *opportunity gap*. Unless early learning, teacher quality, and post-school transitions improve, economic inequality will remain structurally locked in.

Education is the most powerful tool for dismantling oppression and achieving true freedom. Rather than just rote learning, repetitively memorizing facts, meaningful learning encourages understanding the "why" and "how" behind concepts, critical thinking, self-reliance, and a deeper, more useful knowledge of oneself, your vocation, environment and one's integration with and function in your community and the world. True liberation comes through education.

But, again, the poor quality of education and high dropout rate in in South Africa acts as a primary driver of inequality. By failing to equip youth with essential skills, the system entrenches poverty across generations, locking millions of learners out of the modern workforce and sustaining one of the highest wealth gaps globally.
